

Wireless data logging at 1 kS/s (1 ms)

330-channel portable logger available with your choice of plug-in modules and wireless modules

Two models: Standard Model and Wireless LAN Model

Standard model (designed for use with plug-in modules only)

LR8450

You can add up to 4 plug-in modules which provides 120 channels of measurement

Configuration example: 120 channels of analog input

Plug-in units

VOLTAGE/TEMP UNIT U8552×4

Each VOLTAGE/TEMP UNIT U8552 accepts 30 channels of input. Add four units for 120 channels of measurement.

Depending on various scenes, you can freely combine six types of plug-in modules

Configuration example: 60 channels of analog input + 1,000 channels of CAN input

Plug-in units

VOLTAGE/TEMP UNIT U8552×2 CAN UNIT U8555×2

Each VOLTAGE/TEMP UNIT U8552 accepts 30 channels of input. Each CAN UNIT U8555 accepts 500 channels of input.

Wireless LAN model

Add channels freely via either plug-in or wireless modules

Can also be used exclusively with wireless modules

Wireless LAN model LR8450-01

Add up to 7 wireless modules in total for a maximum of 330 channels

Configuration example: 330 channels

Plug-in modules

VOLTAGE/TEMP UNIT U8552×4

Wireless modules

WIRELESS VOLTAGE/TEMP UNIT LR8532×7

With four U8552 VOLTAGE/TEMP UNITs and seven LR8532 WIRELESS VOLTAGE/TEMP UNITs, you can measure a total of 330 channels.

Mix plug-in and wireless modules

Mixing and matching plug-in modules and wireless modules will allow you to build a measurement system that suits your needs.*1

If wireless modules are used with other modules (wireless or plug-in), the sampling-timing shift between the units is periodically corrected.*2

In addition, at times when the wireless communication is cut off, the correction function works after the communication is restored and the sampling-timing shift between the modules is corrected.

^{*1} Up to four CAN modules can be used at the same time. (Plug-in and wireless modules may be used in any combination.)

^{*2} Even in good wireless communication conditions (low interference) the sampling-timing between modules may shift about 20 ms. In bad wireless conditions, the sampling-timing shift will be much worse than this.

Voltage measurement

Measure outputs from a pressure sensor and other sensors at 1 kS/s max. sampling rate (1 ms interval sampling)

1 kS/s sampling is necessary to record outputs of several tens of Hertz from pressure sensors and vibration sensors.

WIRELESS HIGH SPEED VOLTAGE UNIT LR8533

Temperature measurement

Measure temperature near inverters and batteries at a sampling rate of up to 100 S/s (10 ms interval sampling)

VOLTAGE/TEMP UNIT U8550 UNIVERSAL UNIT U8551 VOLTAGE/TEMP UNIT U8552(*)

WIRELESS VOLTAGE/TEMP UNIT LR8530 WIRELESS UNIVERSAL UNIT LR8531 WIRELESS VOLTAGE/TEMP UNIT LR8532(*)

Consistent sampling rate even with added modules

Each module incorporates its own A/D converter. This design keeps the maximum sampling rate high even when Modules are added.

Example 1: use four U8553 HIGH SPEED VOLTAGE UNITs (with 5 channels each) to measure 20 channels at a sampling rate of 1 kS/s (1 ms).

Example 2: Use four U8550 VOLTAGE/ TEMP UNITs (with 15 channels each) to sample 60 channels at a sampling rate of 100 S/s (10 ms).

Consistent noise resistance even with added modules

Since increasing the number of modules has no effect on the cutoff frequency, which changes with the sampling rate, power supply noise can be reduced without sacrificing noise resistance.

(ex.) Sampling rate: 1 S/s Number of channels Cutoff frequency 1 ch to 15 ch 60 Hz 16 ch to 30 ch 60 Hz 31 ch to 45 ch 60 Hz 46 ch to 60 ch 60 Hz "When using a power supply frequency of 60 Hz.

Same cutoff

frequency

Set filters

Set filters for each module

The cutoff frequency, which varies with the data refresh interval, can be set separately for each module. You can use long data refresh intervals, which boost filter effectiveness, and short data refresh intervals for different modules at the same time.

- Measure control signals at maximum speed: module1 (data refresh interval: 1 ms)
- Measure battery voltage fluctuations: module 2 (data refresh interval: 1 ms)
- Measure temperature using thermocouples: module 3 (data refresh interval: 1 s) with **strong filter**

^{*}Sampling rate of 100 S/s (10 ms) is available when using 15 or fewer channels.

Strain measurement

Measure strain with a 1 kS/s sampling rate (1 ms)

Connect strain gages directly and measure at a sampling rate of up to 1 kS/s. Strain gages tend to have long, thin wires that are easily broken, but that potential pitfall can be avoided by using wireless modules so that wiring is minimized.

STRAIN UNIT U8554

WIRELESS STRAIN UNIT LR8534

Connect strain gages directly

The strain units have a built-in bridge box, allowing you to connect strain gages directly to their input terminals.

Strain-gage-type converters such as load sensors and pressure sensors can be connected directly to make measurement.

Reduced influence of noise

Stable measurement, even at high voltages and high frequencies

Most competing loggers are incapable of measuring temperature accurately in noisy environments due to the influence of high frequencies, causing values to shift or fluctuate significantly. The LR8450 uses a new design to dramatically reduce the influence of high-frequency noise.

Example: measure temperature by connecting the tip of a K thermocouple to the screw on an inverter's PWM output terminal (W-phase) when using the U8550 VOLTAGE/TEMP UNIT (settings: 10 S/s sampling in the 100°C f.s. range).

Most competing loggers exhibit significant fluctuations when the inverter is operating, whereas the MEMORY HiLOGGER LR8450 does not.

CAN measurement NEW

One instrument, two uses: **CAN input + CAN output of measured values**

	U8555	LR8535
Input: CAN and CAN FD	Yes	Yes
Output: CAN and CAN FD	Yes	No

Receive CAN signals using a contactless, wireless setup!

Wireless modules interoperate flawlessly with the NON-CONTACT CAN SENSOR SP7001-95! Supply power from the battery-driven wireless unit to the NON-CONTACT CAN SENSOR SP7001-95 via USB to implement a wireless CAN measurement setup that requires no external power supply. (The system can operate for about

five hours on battery power.) Since no ECU analysis tools or computer is required, the setup takes little space to reduce the amount of wiring needed for driving tests.

Convenient function 1 Notification when a specific ID is received

Start and stop measurement when a CAN signal with a specific ID occurs

Convenient function 2 Bit mask trigger function

Set a trigger that corresponds to a particular pattern with the bit mask trigger function. For example, this function can be used when you wish to start recording when a control signal exhibits the specific pattern of "10101010."

Support for multichannel measurement: receive up to 500 channels with 1 module

As a result of electrification, automobiles now use enormous quantities of data internally, and the amount of data on CAN buses consequently is growing. A single CAN module can capture up to 500 channels*1 of data. The LR8450 can accommodate up to four modules, allowing you to measure up to 2000 channels of CAN data. Each channel can collect information for one signal *1 With a recording interval of 100 ms

Convenient function 3 Sending user-defined CAN frames

Sometimes it's necessary to send a CAN signal to an ECU in advance so that the ECU will output data to the CAN bus. With the U8555, you can send userdefined CAN frames to a CAN bus while performing CAN measurement.

One-time transmission

When you need to send a CAN control frame once in order to change an ECU's operating mode

Repeated transmission

When an ECU won't output the value you wish to capture unless you send specific CAN data each time

CAN UNIT U8555CAN and CAN FD input or output

WIRELESS CAN UNIT LR8535
CAN and CAN FD input only

CAN Editor (standard CAN configuration software accessory)

Install this software from the application disc that comes with the MEMORY HiLOGGER LR8450 onto a PC to easily configure CAN Unit settings.

Setting method Online or offline

Save settings configured using the CAN Editor in the CES format and then load them with the LR8450. You can also configure instruments offline when a LAN or USB connection is difficult to extend the

Receive mode Loading DBC files

In addition to setting up channels manually, you can complete CAN communication definition settings simply by loading a DBC file.

Output mode Automatically configuring output targets

Creating output communication definitions one channel at a time for a logger that's handling a large number of channels is extremely time-consuming. With the CAN Editor, you need only specify the start ID and click the "Configure Automatically" button to complete all communication definitions. Those definitions can then be output as a DBC file and loaded onto an upstream system to complete the configuration process.

Wireless for ease of use

Collect data from dispersed locations all at the same time

The LR8450-01 can simultaneously collect measurement data from wireless units installed on various test equipment.

Collect measurement data from multiple locations with a single logger

Manage data in a single time sequence

Units can be placed in confined locations

Check the display during measurement

Up to 30 m* (line-of-sight)

* Better connection may be attained from placing the LR8450-01 and/or wireless module on the floor or ground for a shorter communication distance.

Peace of mind in the event of an interruption in power or wireless connectivity

Peace of mind if communications are temporarily interrupted

Buffer memory holds up to 5 min.*1 of measurement data

Each wireless unit has a built-in buffer memory that can hold up to 5 min.*1 of measurement data. Data are resent along with more recent measurement data once communications resume, after which the data are restored inside the LR8450-01*2.

The system can be configured to output an alarm if communications are interrupted or if a module encounters a low-battery state.

- *1 The duration for which measurement data can be maintained does not vary with the recording interval (up to a maximum of 5 min.)
- *2 Data collected using the Logger Utility software measurement cannot be restored in this manner.

Battery operation

Use modules in locations where there's no AC power

Example

The wireless VOLTAGE/TEMP UNIT LR8530 can operate for about 9 hours on battery power. If the unit is charged at night, it can operate on just the battery pack during the day.

Using the Battery Pack Z1007

Wireless module model	Continuous operating time
LR8530	Approx. 9 hr.
LR8531	Approx. 7 hr.
LR8532	Approx. 9 hr.
LR8533	Approx. 9 hr.
LR8534	Approx. 5 hr.
LR8535	Approx. 10 hr.*

Peace of mind in the event of a power outage during measurement

Install a battery pack for peace of mind

If you've installed a battery pack in a module that's being powered by an AC adapter, the unit will automatically switch to battery power in the event of an outage so that the LR8450-01 can continue making measurements.

Make measurements in locations where it would be difficult to route wires

Work time can be reduced using the LR8450-01 and wireless modules, since only minimal wiring is required. If the measurement target is located in a lab, this approach eliminates the need for wiring and avoids having to drill holes in the walls of the monitoring room where data is being checked.

Inside a room, or outside, you can make measurements with the door closed.

Simple registration of wireless modules

Wireless modules, located within the range, that are not connected to another LR8450-01, can be automatically detected. Simply choose the module you wish to register from the list.

Check the unused wireless LAN channels and select the wireless channel to use

You can reduce interference from other wireless devices by using an open channel (wireless frequency range being used by wireless devices in the area). Check for open channels on the instrument's screen.

Observe data from a remote location using a PC or a tablet

By connecting the LR8450-01 to a PC or a tablet via wireless LAN, you can control the instrument remotely using the built-in HTTP server or obtain older data files using the built-in FTP server.

(You cannot use Logger Utility when using Station Mode or Access Point Mode. See below.)

Easy-to-read display of measured values

External control terminals and interfaces to accommodate a broad range of use cases

Motor speed, flow rate integration, etc.

8 channel pulse measurement

In "Revolve" mode, monitor production equipment by measuring the variations in revolution speed of motors or drills. In "Count" mode, identify operation status by acquiring integrated power or flow rate.

Useful in preventive maintenance

8 channel alarm outputs

You can set alarm output for eight channels. You can set a level, a window, a slope, and a logic pattern on channels you wish to monitor.

Two terminals for voltage outputs (5, 12, or 24 V)

Supplying power to the sensors

The LR8450/LR8450-01 provides two output terminals for voltages, each of which can supply 100 mA current, eliminating the need for a separate sensor power supply. You can select 5 V, 12 V, or 24 V from the VOUTPUT1 terminal and 5 V or 12 V from the VOUTPUT2 terminal.

Replace storage media during real-time saving

No need to stop recording

When you remove the storage media while recording data, and reinsert it, data remaining in the internal buffer memory will continue to be stored in a new and different file.

Extensive calculation functions

Numerical calculation function

In addition to the maximum and minimum value calculation functions provided by previous models, the LR8450/LR8450-01 offers an extensive range of calculations, including on/off time, count, and usage ratio.

Types of calculations

Waveform calculation function

Calculate data while measurement continues and display calculated waveforms in real time. Calculation results are saved on a separate and dedicated calculation channel.

Types of calculations

Aggregation
Simple average
Moving average
Integration

Recording over extended periods of time without interruption

Collect data on a storage device (SD memory card or USB drive) while measuring continues. The ability to segment files by hour or day without stopping measurement is convenient when you need to review data later.

Maximum recording time (estimate)

Example: Recording 30 analog channels with 2 modules (no alarm output or waveform processing)

Because the header portion of waveform files is not included in capacity calculations, expected actual maximum time is about 90% of those in the tables. The maximum recording time varies with the number of measurement channels. Recording times are doubled if the number of measurement channels shown in the table is halved.

When recording 30 analog channels with two U8550/U8551 modules or one U8552 module (no alarm output, no waveform processing) When recording 30 analog channels with two LR8530/LR8531 modules or one LR8532 module (no alarm output, no waveform processing)

Recording intervals	Internal buffer memory (512 MB)	SD MEMORY CARD Z4001 (2 GB)	SD MEMORY CARD Z4003 (8 GB)	USB DRIVE Z4006 (16 GB)
10 ms	1 d	3 d 20 h	15 d 8 h	30 d 12 h
100 ms	10 d 8 h	38 d 18 h	153 d 9 h	305 d 5 h

Control the instrument remotely and capture data on a PC

HTTP server function

Control the instrument remotely from a PC

Use a standard Web browser to control the LR8450/LR8450-01, start and stop measurement, then enter comments.

Use a mouse to operate waveforms displayed on a PC

Enjoy intuitive mouse-based control, including waveform scrolling and cursor operations.

FTP server function

Download data files onto a PC

Your PC can get files from inside the SD memory card or USB drive inserted to the LR8450/LR8450-01.

FTP client

Automatically transfer data files to an FTP server

Automatically transmit files to an FTP server from the SD memory card or in the USB drive inserted to the LR8450/LR8450-01.

NTP client function

Set the logger's clock

Set the clock in the LR8450/LR8450-01 and synchronize it to an NTP server on the network.

E-mail transmission function

CAN-FD - Powertrain

Receive email notices on errors and other information

Receive emails to your PC or mobile phone when there is a communication loss and when an error occurs during measurement and wireless module communications.

It can also send instantaneous values by e-mail periodically.

Use with other tools

Output measured values using XCP on Ethernet

The LR8450 supports XCP slave operation based on the XCP protocol, a standard developed by the Association for Standardisation of Automation and Measuring Systems (ASAM). You can perform control to start and stop measurement and acquire measured values using an XCP master. (Measured values from CAN modules cannot be output.)

CAN - Body
Vehicle bus

CAN bus measurement

GateWay ECU

ECU/bus measurement interface

Interface module

•Overwrite control parameters while ECUs continue to operate
•Consolidate data from multiple measurement systems and buses
•Monitor large amounts of microcontroller RAM at high speeds

NEW

Load data using MDF-compatible waveform viewers

Voltage, temperature, strain, CAN, and other measurement data captured by the LR8450 can be saved in the Measurement Data Format (MDF) and loaded by other software that supports the format.

Commercially available software

FAMOS

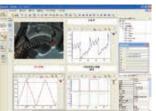

- More than 400 calculation processing variables
- · Easy report creation functionality

FlexPro

- · High-speed search and processing of large volumes of data
- Share analysis templates within your company

NI DIAdem

- Functionality ranging from searching and loading of data to analyzing and creating of reports
- · Dialog-based interface

OS-2000

- · Freely edit large data that cannot be handled by Excel
- Simultaneously display the waveforms which have different frequencies

Logger Utility (standard accessory)

Collect data at sampling speeds of up to 10 ms on a PC

is supported for recording intervals of 10 ms or longer. U8555 and LR8535 CAN Unit real-time measurement and viewing of waveform data are not supported. Please use the GENNECT One software for real time viewing of CAN data by the U8555 and LR8535. Connection

Recording interval 10 ms

Simultaneous recording 2035 channels No. of connected units up to 5

destination PC

method LAN/USB

+ 60 waveform calculation channels

Simultaneously log data from five LR8450 instruments at a speed of up to 10 ms.

Display logged data in real time as a graph.

GENNECT One

Make simultaneous measurements using multiple instruments

Aggregate measurement data from not only loggers, but also waveform recorders, power meters, and other instruments onto a single PC.

Record data on a PC in real time using the Logger Utility application software, a standard accessory. You can even scroll waveforms backwards to view older data

while recording is in progress. A real-time measurement

Display this measurement data on a single graph in real time. Summarize it in daily and monthly reports. Manage in in a centralized manner. GENNECT One is a Windows application that specializes in aggregating measurement data.

Data including CAN data from the U8555 and LR8535 can be viewed and measured in real time (logging function, dashboard function). Real time measurement and viewing of CAN data will be available from the LR8450's next firmware update around mid or late 2022.

> GENNEC One is a free application. Access this 2D Code for details and downloads.

Recording interval 1 s

Simultaneous recording 512 channels

Total No. of connected devices

Save destination Connection method

PC

up to 15* LAN

*Up to 30 devices can be connected when using only the logging or dashboard functions

Simultaneously log data from instruments like recorders and power meters as frequently as 1 s.

Display logged data in real time as a graph. Automatically create CSV files and daily/monthly reports.

Graphically display measured values using the dashboard function. Visually identify anomalies.

Download instrument data files saved on instruments' SD cards.

Change instrument settings remotely.

Software Logger Utility specifications

U8555 CAN unit and	LR8535 wireless CAN unit are not supported.
Operating Environment	Windows7 (32/64 bit) Windows8 (32/64 bit) Windows10 (32/64 bit)
Overview	Control PC-connected logger to receive, display, and save measured waveform data sequentially. (Total recording samples is maximum 10 million data. Data exceeding this number will be segmented into separate measurement files while recording continues.) *Real-time measurement on the LR8450, LR8450-01 is possible with a recording interval of 10 ms or more.
Function	Controllable loggers: 5 Data Collection System: 1 system Display Format: • Waveforms (split time-axis display is possible) • Numerical values (logging): numerical display can be enlarged • Alarms Above items can be displayed simultaneously Numerical value monitor Display: display in a separate window is possible. Scroll: waveforms can be scrolled during measurement.
Data Collection	Settings: data collection settings of logger modlues can be configured Monitor function can be checked before measurement. Save: save settings from multiple devices supporting real-time measurement (LUS format) and measurement data (LUW format) as one file. Data save format: real-time data collection file (LUW format), transfer data in real-time or non-real-time to Microsoft Excel®, Excel® template can be specified Event mark: recording during measurement is possible
Waveform Display	Supported files: waveform data file (LUW format, MEM format) Display format: waveforms (split time-axis display available), simulta- neous display of numerical values (logging) is available Maximum number of channels: 2,035 channels (measured) + 60 channels (waveform calculation) Waveform display sheets: waveform of each channel can be dis- played on any of the ten sheets Scroll: available Event mark recording: available Cursors: cursors A and B can be used to display voltage values at cursor positions. Screen capture: screen capture of waveform display is available
Data Conversion	Applicable files: waveform data file (LUW format, MEM format) Conversion section: all data, specified section Conversion format: CSV format (comma delimited, space delimited, tab delimited), transfer to Excel® sheet, LR5000 format (hrp2,hrp) Data thinning: simple thinning with any thinning number
Waveform Calculation	Calculation items: arithmetic operations Number of calculation channel: 60 channels
Numerical Calculations	Applicable data: waveform data file (LUW format, MEM format), real-time measurement data, waveform calculation Calculation items: average value, peak value, maximum value, time to maximum value, minimum value, time to minimum value, on time, off time, on count, off count, standard deviation, aggregation, area value, and integration Save calculation: performs numerical calculation and save to file
Search	Applicable data: real-time data collection file (LUW format), main unit measurement file (MEM format), waveform calculation data Search mode: event mark, date and time, maximum position, minimum position, local maximum position, local maximum position, level, window, and variation
Print	Applicable printer: printer compatible to the OS in use Applicable data: waveform data file (LUW format, MEM format) Print format: waveform image, report print, list print (channel settings, event, cursor value) Print area: all area, specified area by A-B cursor Print preview: available

Option specifications (sold separately)

Plug-in units: U8550, U8551, U8552, U8553, U8554, U8555 Shared specifications

Host model	LR8450/LR8450-01 MEMORY HILOGGER
Operating temperature and humidity range	-10°C to 50°C, 80% RH or less (non-condensing)
Storage temperature and humidity range	-20°C to 60°C, 80% RH or less (non-condensing)
Vibration resistance	JIS D 1601:1995 5.3 (1), Class 1A (passenger vehicle) equivalent
Accessories	User manual, mounting screw × 2, wiring confirmation label (U8554 only)

Wireless units: LR8530, LR8531, LR8532, LR8533, LR8534, LR8535 Shared specifications

Host model	LR8450-01 MEMORY HILOGGER		
Control communications method	Connect wirelessly via Z3230 WIRELESS LAN ADAPTER (included)		
Communications buffer memory	Mword (volatile memory) Saves data in the event of a communications error. Data is resent when communications are restored.		
Operating temperature and humidity range	-20°C to 55°C, 80% RH (non-condensing) (charging temperature range: 5°C to 35°C)		
Storage temperature and humidity range	-20°C to 60°C, 80% RH (non-condensing)		
Vibration resistance	JIS D 1601:1995 5.3 (1), Class 1A (passenger vehicle) equivalent		
LED display	Wireless connection and measurement status, error status, AC		

Auto-connect function	Available
Accessories	Z3230 WIRELESS LAN ADAPTER, user manual, Z1008 AC ADAPTER, mounting plate, M3×4 screw × 2 (for use with mounting plate), wiring confirmation label (LR8534 only)
Z3230 wireless specifications	Wireless LAN (IEEE 802.11b/g/n) Range: 30 m (line of sight) Encryption: WPA-PSK/WPA2-PSK, TKIP/AES Channels: channel 1 to 11

Power supply specifications				
AC adapter	Z1008 AC ADAPTER (12 V DC, standard accessory) Rated supply voltage: 100 to 240 V AC Rated power supply frequency: 50/60 Hz Maximum rated power: 25 VA (including AC adapter) Normal power consumption (instrument only, without battery pack) LR8530, LR8532, LR8533: 2.5 VA LR8531; 3.0 VA LR8534, LR8535: 4.0 VA			
Battery	Z1007 BATTERY PACK (when using AC adapter, AC adapter takes precedence.) Rated supply voltage: 7.2 V DC (Li-ion 2170 mAh) Maximum rated power LR8530, LR8532: 2.1.5 VA LR8531, LR8533: 2.0 VA LR8534, LR8535: 3.5 VA			
External power supply	Rated supply voltage: 10 to 30 V DC Maximum rated power: 8 VA (30 V DC external power supply, while charging battery) Normal power consumption (12 V DC external power supply, without battery pack) LR8530, LR8532, LR8533: 2.5 VA LR8531: 3.0 VA LR8534, LR8535: 4.0 VA			
Continuous operating time	When using Z1007 BATTERY PACK (all data refresh rates, good communications state, 23°C reference values) LR8530, LR8532, LR8533: approx. 9 h LR8531: approx. 7 h LR8534: approx. 5 h LR8535: approx. 10 h (approx. 5 h when using two non-contact CAN sensors)			
Charging function	When Z1007 BATTERY PACK installed while connected to AC adapter or 10 to 30 V DC external power supply Charging time: approx. 7 h (23°C reference value)

WIRELESS VOLTAGE/TEMP UNIT LR8530 WIRELESS UNIVERSAL UNIT LR8531 WIRELESS VOLTAGE/TEMP UNIT LR8532

(Accuracy guaranteed for 1 year, post-adjustment accuracy guaranteed for 1 year) **General specifications**

Ochorai Specificati	0113
Number of input channels	U8550: 15 (set voltage, thermocouple, or humidity for each channel) LR8530: 15 (set voltage or thermocouple for each channel) U8551, LR8531: 15 (set voltage, thermocouple, humidity, RTD, or resistor for each channel) U8552: 30 (set voltage, thermocouple, or humidity for each channel) LR8532: 30 (set voltage or thermocouple for each channel)
Input terminals	U8550, LR8530: M3 screw-type terminal block (2 terminals per channel) U8551, LR8531: push-button type terminal block (4 terminals per channel) U8552, LR8532: push-button type terminal block (2 terminals per channel)
Output terminals	M3 screw-type terminal block (1 output, 2 terminals, Z2000 HUMIDITY SENSOR power supply [can power up to 15 Z2000 HUMIDITY SENSOR])(LR8531 only)
Measurement target	U8550, U8552: voltage, temperature (thermocouples), humidity LR8530, LR8532: voltage, temperature (thermocouples) U8551, LR8531: voltage, temperature (thermocouples), humidity, temperature (RTD), resistor
Input type	Scanning by semiconductor relays All channels isolated (not isolated when measuring with RTD, resistance or humidity)
A/D resolution	16 bits
Maximum input voltage	±100 V DC (maximum voltage between input terminals without causing damage)
Maximum channel- to-channel voltage	300 V DC (maximum voltage that can be applied between each input channel without causing damage; not isolated when measuring with RTD, resistance or humidity) "Channels are isolated from each other with semiconductor relays. Never allow a voltage exceeding the product specifications, for example a lightning surge, to be applied across channels as doing so may cause the semiconductor relays to short.
Maximum rated terminal-to-ground voltage	300 V AC, DC (maximum voltage that can be applied between input channels and the instrument or its chassis, or between units without causing damage; humidity measurement not isolated)
Input resistance	$10~M\Omega$ or greater (10 mV f.s. to 2 V f.s. voltage ranges, thermocouple ranges, RTD and resistor ranges) $1~M\Omega$ ±5% (10 V f.s. to 100 V f.s. voltage range, 1-5 V f.s. voltage range, humidity measurement)
Allowable signal source resistance	1 kΩ or less
Data refresh interval	10 ms to 10 s (10 selectable levels)
Digital filters	Digital filter cutoff frequency is automatically set to data refresh interval, burnout setting, and power supply frequency filter setting
Dimensions	U8550, U8551, U8552: approx. 134W × 70H × 63D mm (5.28"W × 2.76"H × 2.48"D) LR8530, LR8531, LR8532: approx. 154W × 106H × 57D mm (6.06"W × 4.17"H × 2.24"D)
Mass	U8550: approx. 345 g (12.2 oz.), U8551: approx. 318 g (11.2 oz.), U8552: approx. 319 g (11.3 oz.), LR8530: approx. 423 g (14.9 oz.), LR8531: approx. 386 g (13.6 oz.), LR8532: approx. 388 g (13.7 oz.), (including Z3230 WIRELESS LAN ADAPTER)
Accessina	Instruction Manual installation service v 2

Instruction Manual, installation screws × 2

Analog input specifications (23 \pm 5°C [73 \pm 9°F], 80% rh or less, after 30 minutes of warm-up and zero-adjustment, with the 50/60 Hz cut-off setting selected)

HIGH SPEED VOLTAGE UNI	T WIRELESS HIGH SPEED VOLTAGE UNIT
U8553	LR8531

(Accuracy guaranteed for 1 year, post-adjustment accuracy guaranteed for 1 year) General specifications

Number of input channels	5 (voltage only)
Input terminals	M3 screw-type terminal block (2 terminals per channel), outfitted with terminal block cover
Measurement target	Voltage
Input type	Scanning by semiconductor relays, all channels isolated
A/D resolution	16 bits
Maximum input voltage	±100 V DC (maximum voltage between input terminals without causing damage)
Maximum channel-to- channel voltage	300 V DC (maximum voltage between input channels without causing damage)
	*Channels are isolated from each other with semiconductor relays. Never allow a voltage exceeding the product specifications, for example a lightning surge, to be applied across channels as doing so may cause the semiconductor relays to short.
Maximum rated termi- nal-to-ground voltage	300 V AC, DC (maximum voltage between input channel and chassis, or between modules, without causing damage)
Input resistance	1 MΩ ±5%
Allowable signal source resistance	100 Ω or less
Data refresh interval	1 ms to 10 s (13 selectable levels)
Digital filters	Digital filter cutoff frequency is automatically set to data refresh interval, burnout detection setting, and power supply frequency filter setting.
Dimensions	U8553: approx. 134W×70H×63D mm (5.28"W×2.76"H×2.48"D) LR8531: approx. 154W×106H×57D mm (6.06"W×4.17"H×2.24"D)
Mass	U8553: approx. 237 g (8.4 oz.) LR8531: approx. 370 g (13.1 oz.) (including Z3230 WIRELESS LAN ADAPTER)

Analog input specifications

(23 $\pm 5^{\circ}$ C/73 $\pm 9^{\circ}$ F, 80% rh or less, after 30 minutes of warm-up and zero-adjustment, with the 50/60 Hz cut-off setting selected)

Channels: 30: maximum sampling rate: 20 ms (When 15 or fewer channels are used, 10 ms)

HIGH SPEED VOLTAGE UNIT U8553

Channels: 5; maximum sampling rate: 1 ms

STRAIN UNIT U8554

Channels: 5; maximum sampling rate: 1 ms

CAN UNIT U8555

Ports: 2, input: CAN or CAN FD, output: CAN or CAN FD maximum sampling rate: 10 $\ensuremath{\mathsf{ms}}$

Model No. Specifications (order code) LR8450 Standard model, main unit only LR8450-01 Wireless LAN equipped model, main unit only

- The LR8450 and LR8450-01 cannot perform measurement on their own. One or more plug-in modules or wireless modules are required (sold separately).
- The LR8450-01 and each wireless module emit radio waves. Use of radio waves is subject to licensing requirements in certain countries. Using it in a country or region other than those indicated may violate the law and may result in legal penalties for the operator. For the latest information about countries and regions where wireless operation is currently supported, please visit the Hioki website.

Wireless modules

WIRELESS VOLTAGE/TEMP UNIT LR8530

Channels: 15: maximum sampling rate: 10 ms

WIRELESS UNIVERSAL UNIT LR8531

Channels: 15; maximum sampling rate: 10 ms

Power supplies

For instrument and wireless modules

BATTERY PACK Z1007

Instrument takes two wireless modules take one For instrument

AC ADAPTER Z1014

Ships standard with LR8450/LR8450-01

For wireless modules

AC ADAPTER Z1008

Fixed Stand

FIXED STAND Z5040

For installing logger on wall

CASE

CARRYING CASE C1012

Accommodates instrument and four plug-in modules or seven wireless modules

Wireless Lan Adapter

For wireless modules

WIRELESS LAN ADAPTER Z3230

Cables, sensors, etc.

LAN CABLE 9642

Straight Ethernet cable, supplied with straight to cross conversion adapter, 5 m (16.41 ft) length

HUMIDITY SENSOR Z2000

(analog output), 3 m (9.84 ft) length

Thermocouple

For reference only. Please purchase locally.

CAN CABLE 9713-01

For the U8555, LR8535. Unprocessed on one end, 1.8 m (5.91 ft) length

NON-CONTACT CAN SENSOR SP7001-95

Supports CAN FD or CAN signals, SP7001, SP9250, SP7150 set

Storage media

*Always use HIOKI optional storage media. Proper operation is not guaranteed when using storage media from other manufacturers, and may prevent the product from saving and loading data properly.

SD memory card Z4001

2 GB capacity

SD memory card Z4003

8 GB capacity

USB drive Z4006

16 GB, long-life, high-reliability SLC flash memory

For the PC

LOGGER UTILITY/CAN EDITOR

LOGGER UTILITY: The control of the measurement of loggers, real-time data collection CAN EDITOR: CAN configuration software Standard accessory

You can download the latest version from our website
